

Press Release

FON AND ONET ("Onet FON") TO DEVELOP A COMMUNITY BASED WIFI NETWORK IN POLAND

London, UK and Warsaw, Poland, 30 August 2006 – FON, the largest WiFi community in the World, and Onet, Poland's leading Internet portal, today announce that they have signed a strategic partnership to jointly develop products and services for the Polish market under the joint brand Onet FON.

In order to promote "Onet FON" WiFi Access Points, Onet will build hotspots in Poland and promote Onet FON routers in its upcoming DSL offering, so that Onet subscribers automatically become members of the FON community and are able to surf for free on all FON Community Access Points in the World.

Onet.pl, owned by Grupa Onet.pl S.A. (GRO/WSE), is Poland's leading Internet portal with over 200 different services and over 4 million active e-mail accounts. On a monthly basis, it records over 2 billion page views. Onet.pl develops and launches new types of advertising targeted to the local market, as well as online games, premium content and online sales for Internet domains, premium SMS services for mobile phones and airplane tickets. The company reported dynamic growth in the first six months of 2006 of 46 % increase in its total sales from corresponding period in 2005.

Onet.pl is part of Poland's leading media group, TVN Group (TVN S.A., TVN/WSE), which apart from Onet, is active in television broadcasting and production.

Lukasz Wejchert, CEO, Onet, said: "Customers have the right to communicate at fair prices whatever the means. Disruptive technologies allow us to fulfill their needs. With OnetSkype we revolutionized the way Polish people communicate with each other across the Globe. With Onet FON, I am convinced that we will revolutionize the way people use the Internet. Our WiFi network will provide ultimate mobility to our user base – and that is Global. We are partnering with FON in order to expand this service further through the "Onet FON" WiFi hotspots, bringing the free, Internet based calling to those homes, schools, small businesses and hotels, who have broadband access to wider offerings of the Internet at faster transmission speeds. FON is a great company, and we are pleased to have them as our partner."

Martin Varsavsky, CEO, FON said: "The Polish internet community is fast becoming one of the largest in Europe. A lot of it thanks to the creativity of the people at ONET who we are so happy to partner with. At FON we have a simple proposition, you pay for your bandwidth at home, install a FON enabled router and you travel the world connecting to the internet for free. Nowadays more and more devices are coming with WiFi including PSPs, Nintendo DS, laptops, digital cameras, music devices, portable TVs, and the new Skype phones that make Skype go mobile. With FON Polish foneros will be able to roam their country and the world

with their gadgets without having to pay the high charges that other technologies such as 3G demand.”

Many leading manufacturers, such as Nokia, Ericsson and Motorola have already launched WiFi phones to the market, to be followed by Netgear, Belkin, Edge-Core, SMC and FON's parent, SKYPE. These phones look and feel like mobile phones, but they actually operate over a WiFi (internet protocol) network using radio spectrum.

About Onet.pl

Grupa Onet (WSE: GRO) is the leading Polish new media group. Grupa Onet conducts its new media activities through Onet.pl (www.onet.pl), Poland's leading internet portal, and offers numerous other services of media and communications nature. Onet.pl is the biggest and most popular multimedia portal in Poland. Apart from revenues generated by various marketing services (advertising, e-commerce, search engine marketing), Onet.pl also profits from customer services (fees) such as, content services, e-mail and hosting services, auctions, classifieds and dating services, and telecommunication services. According to the latest available data from Megapanel PBI/Gemius (as of June 2006), 77.0% of Polish internet users make use of Onet.pl each month, and in June 2006 they accounted for 9.7 million real users. In 2005, according to gemiusTraffic, Onet.pl on a monthly basis recorded an average of 2 billion page views.

About TVN Group

TVN S.A. (TVN/WSE) was incorporated in 1995 and became a listed company in 2004. Since its foundation, TVN has launched a family of eight television channels under the TVN umbrella, ranging from general entertainment channels, through 24 hours news channel, automotive channel to life style channel. By combining the number one commercial TV broadcaster with the number one Internet portal in Poland, TVN Group can directly access the highest growth segment of the advertising market and have a unique opportunity to convert anonymous television audiences into well-known subscribers and thematic communities. www.tvn.pl.

About FON

FON is the largest wi-fi community in the world. It was launched in February 2006 by Martin Varsavsky, the Argentinian serial entrepreneur with investment of \$21.7million from Google, Skype, Index Ventures and Sequoia Capital to promote FON's objective to create a worldwide community of one million wi-fi hotspots by the end of 2007. FON allows its members, called "Foneros" or "Foneras" to become part of the community, setting up their own access point and sharing their broadband Internet connection. This in turn allows them to share other wireless access points on FON's global wireless Community.

FON enables ISPs to offer their customers worldwide mobility and also allows developers to create new wireless applications based on FON's open source (OS) platform. www.fon.com
